

C.T.S.[®] CONTAINERLOCK

- Detachable
- SCM approved
- Galvanised
- Locked inside hasp

- Abloy PL358N disc lock
- Toughened shackles
- Security card
- From 240 to 420mm

SOME LOCKS ARE SIMPLY CLOSED TO COMPETITION

The quality container lock from C.T.S., produced in house, is phenomenally strong and extremely secure. After various intensive tests, the new lock more than meets the stringent requirements of SCM/TNO (2009) and is therefore suitable for the heaviest category, applied by insurance companies.

The hardened steel containerlock is also very efficient when it comes to fastening. Toughened steel shackles are simply hooked behind the bars to the container/loading platform and the whole is slid together.

The hooks are closed with the unique Abloy padlock which is concealed in a steel casing. Suitable for all shipping and building site containers. The steely containerlock has a Rockwell score of 63. Compare: Diamond is 100 Rockwell

The containerlock is one of the many mechanical security products from C.T.S. for builders and transportation, both at home and abroad. They include kingpinlocks, trailerringlocks, special loading platform security solutions and the like.

Our locks can be supplied as keyed-differently, keyed-alike or with master keys and can also be integrated in an existing key plan.
