shackles •

• 2 keys

Galvanised •

• Certificate and
Security card

Locked •
inside hasp

• From 230
up to 460 mm.

SOME LOCKS ARE SIMPLY CLOSED TO COMPETITION

The quality container lock from C.T.S. produced in-house is phenomenally strong and extremely secure. After various intensive tests, the lock was found to perform well above the highest requirements.

The hardened steel container lock is also very efficient where fastening is concerned. The toughened steel shackles are simply hooked behind the bars of the container/loading platform and the whole is slid together.

The hooks are closed with the unique Abloy padlock which drops down into a steel sleeve when fitted. Suitable for all shipment and building site containers.

The container lock is one of the many mechanical security products from C.T.S. for builders' and shipment transportation, both at home and abroad. They include kinpin locks, trailer ring locks, special loading platform securitys, and the like.

The Abloy Padlocks are available as keyed-differently, keyed-alike or as masterkey system. Also available on an existing Assa Abloy number.
