

# SITELOCK®

- To be fixed to container by welding
- Abloy PL358 padlock
- Security Card
- 1 year warranty
- Padlock locked in hasp

## Some locks are simply closed to competition.

Especially if it concerns mechanical security locks that are clearly designed for a specific purpose. A good example of such a lock is the phenomenally strong and extremely safe Sitelock, which is produced in-house.

Specially developed for containers which require constant security, so even at night and during holidays. Rigorously tested, sturdy, user-friendly and easy to fit.

It is practically impossible to force this security-lock. It consists of two parts which slide into each other when the doors are closed and are then locked, protected inside the sitelock, with the unique and indestructible Abloy padlock. This system can be used on building sites and transport containers.

The Sitelock is one of the many C.T.S. mechanical security products for building site and shipment transport, both at home and abroad. Other C.T.S. security products are also our kingpin locks, containerdoorlocks, demountable containerlocks and trailerringlocks.

Masterkeys can be supplied when several locks or combinations of products are purchased.
